

The Storage Authority

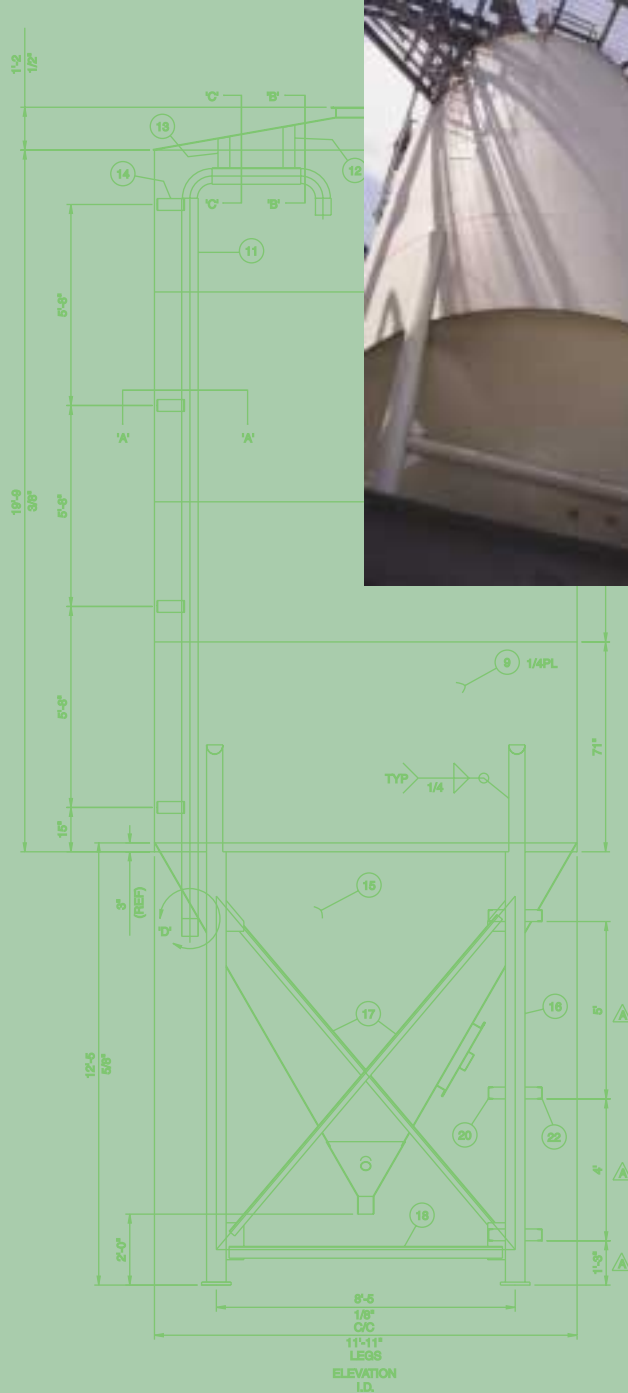

Bolted and Welded Storage Tanks
BOSSTANK

Welded Storage Tanks

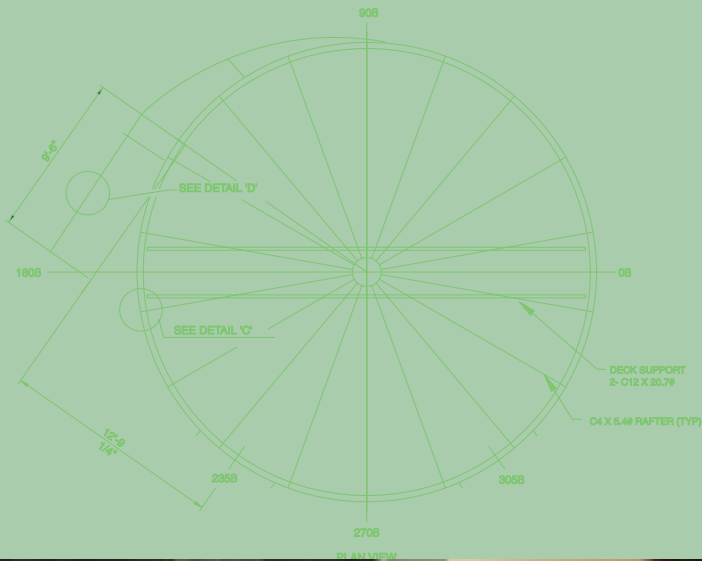

BOSS TANK instantly assumed a leadership position in the silo and tank industry with the most efficient storage fabrication facility in the world. We produce shop-welded coated carbon steel and alloy storage tanks. Applications include hopper bottom storage for plastics, chemicals, food and minerals and flat bottom designs for process liquids.

Based on years of experience in shop-welded tank design and fabrication, BOSS TANK has set superior welded design parameters, manufacturing to precision standards. From our shop safety record through our innovative approach to design integrity and quality control procedures, BOSS TANK has established a new benchmark of performance for shop-welded tank fabrication.

When fabrication is completed, carbon steel tanks are moved to a self-contained, quarantined and environmentally controlled blast room with a dedicated air-handling system. Here the tank surface is prepared for coating. The tank, still isolated, is then moved into an environmentally controlled coating room where the coating system is applied to the commercial (SP6) surface to produce a lasting, superior protective finish.

Custom hopper slopes, configurations and structure designs are a few of our available options. BOSS welded storage tanks may be engineered for mass flow or funnel flow and are suitable for a wide range of dry bulk materials. Special design requests are welcome. BOSS TANK is a competitive price leader.

Bolted Storage Tanks

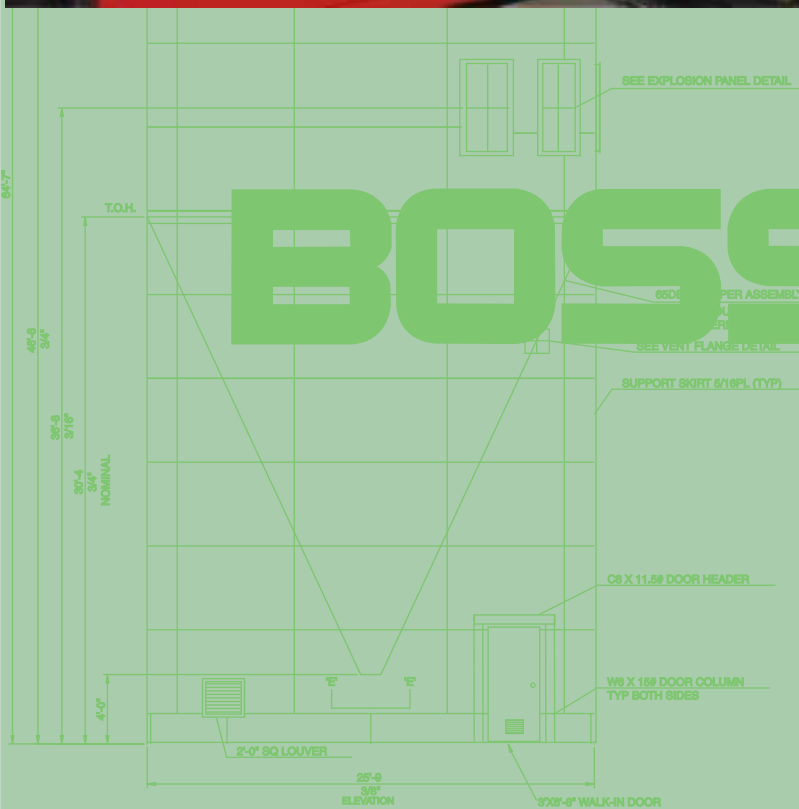

BOSS flat panel bolted tanks offer the same outstanding design and fabrication efficiencies as our welded tanks. Careful engineering has produced a superior modular panel that can be assembled, commissioned and put into operation quickly. As a result, these discernibly high quality tanks are the best value in bolted storage. In addition to the dry bulk markets, applications for our tanks include potable water, process water, fire protection and industrial liquids.

Strict manufacturing practices ensure that BOSS panels are produced to Quality Assurance certified standards. The flat panel design creates a smoothwall interior that is superior to flanged panel designs. The BOSS TANK bolted design has gained rapid acceptance for both dry bulk and liquid applications and is positioned to replace older styles of bolted tank fabrication.

Our commitment to coatings led BOSS TANK to develop the premier bolted powder coating line in the world. All carbon steel parts undergo a thorough preparation process including steel grit blast (SP10), washing and drying prior to coating. Our specially formulated Fusion Bond EP™ and LIQ Fusion EP™ coating systems produce uniform shell coverage and superior edge protection.

Our tested and proven curing parameters, including time, oven temperature and material thickness are continuously electronically monitored. The BOSS TANK coating systems and facilities are NSF approved, and all elements are FDA compliant.

By the time the bolted tank parts are placed on protective pallets for shipment, they have been repeatedly inspected and approved for delivery. Every bolted BOSS TANK is engineered for its application and fabricated to the customer's specification.

Services

BOSS TANK provides selection assistance to prospective customers and technical service to companies with projects that have storage components.

Selection & Budgeting

- Telephone consultation
- Needs analysis
- Tank configuration
- Budget assistance
- Project estimates

Specification & Bidding

- Product specification
- Preliminary scheduling
- Pricing proposals

- Production schedules
- Project commitment

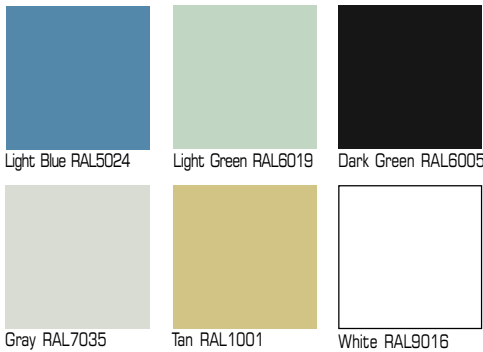

Approval & Construction

- Approval package
- Structural drawings
- Certified drawings
- Construction services
- Inspection/Commissioning

The BOSS TANK powder coating facility has a line rating capacity three times greater than any other bolted tank manufacturer.

Standard Colors

BOSS TANK offers six standard exterior topcoat colors. We utilize the RAL color identification system to provide customers with an accurate, universally available reference. For an additional charge, we can match your supplied color sample.

The colors shown are printed approximations. The exact color can be viewed using RAL standard color samples.
